

PASSPORT is an advanced detergent system specifically designed to remove road film, brake dust and other metallic contaminants from tires and rims.

PASSPORT also excels in cleaning and brightening white walls and raised white letters. **PASSPORT** is a fast acting, high foaming, super concentrated formula for use in prep areas and CTA units. This cleaner may be applied as a low pressure spray or in conjunction with air injected foaming CTA equipment.

DIRECTIONS

PASSPORT should be diluted prior to use. Actual dilution will vary on the type of equipment being used and the degree of soil to be removed. Typically dilutions start at 1 part **PASSPORT** to 5 parts water. Apply solution directly to wheel and tire surface and allow to penetrate for at least 30 seconds. Rinse thoroughly with water and dry with a microfiber or terry cloth towel.

NOTE: Always clean tires and wheels one set at a time to prevent the cleaner from drying.
